

D-COS

DVT PUMP FOR ACTIVE USER

Portable Pneumatic Device for Preventing Deep Vein Thrombosis
For the user's convenience and wide application.

D-COS

DVT prevention pump is an instrument designed to prevent Deep Vein Thrombosis. Using haemostatic agents is unavoidable to control bleeding during surgery, which could create blood clots. The formation of blood clots would lead to serious side effects such as blockage of blood vessel in lung or brain. D-cos provides you with better solution to prevent DVT and save you from threatening side effects. You can simply wrap D-cos air cuff around your calf and turn on the device for your treatment. D-cos delivers pneumatic pulse to your calf through air cuff and smoothly stimulates your blood circulation. You will be pleased with rhythmical air pressure of D-cos.
